

# Les enceintes circulaires

## Catalogue des enceintes de type 'eghazer'

Ce faciès est décrit seulement sur les monuments supérieurs à 10 mètres, plus faciles à caractériser. Parmi les 405 monuments supérieurs à 10 mètres, 160 sont de type 'eghazer'. Ils sont construits en terre argileuse et sont de type épais voir très épais même. Initialement décrit seulement en Ighazer, il apparaît peut être une certaine continuité d'avec l'Aïr, qu'il faudra consolider. La moitié de ces enceintes circulaires n'ont pas d'élément intérieur, mais il faut bien prendre en compte le fait que ce type de monument en terre se dégrade fortement. Enfin, on note qu'ils sont le plus souvent groupés sur des petites hauteurs de la plaine, mais toujours argileuses ce qui dénoterait une installation tardive par rapport à d'autres types de monuments comme les bazinas ou monuments à alignement installés sur des hauteurs rocheuses.

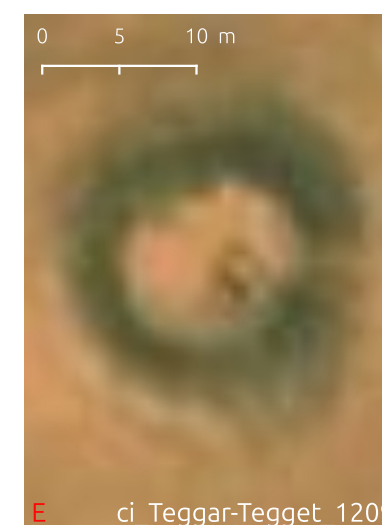

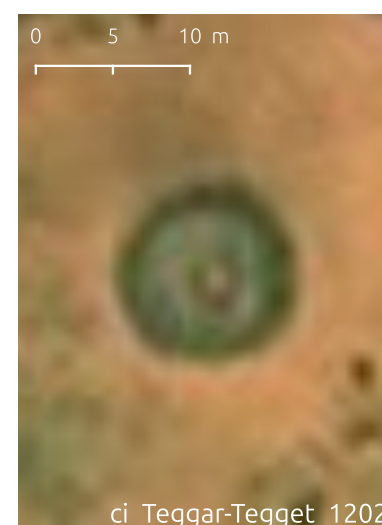

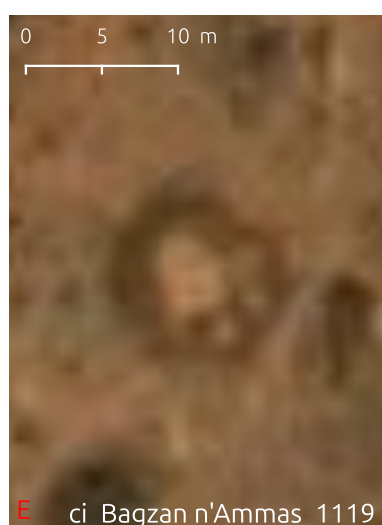

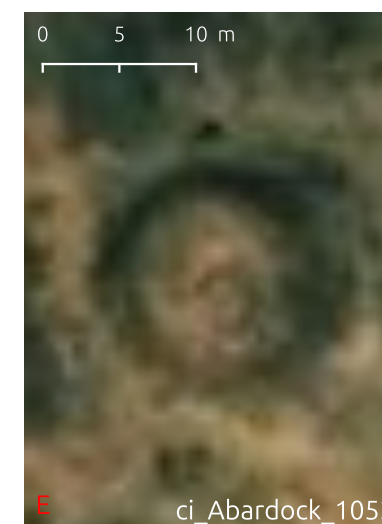

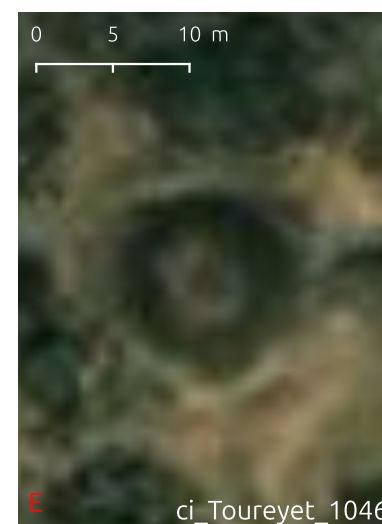

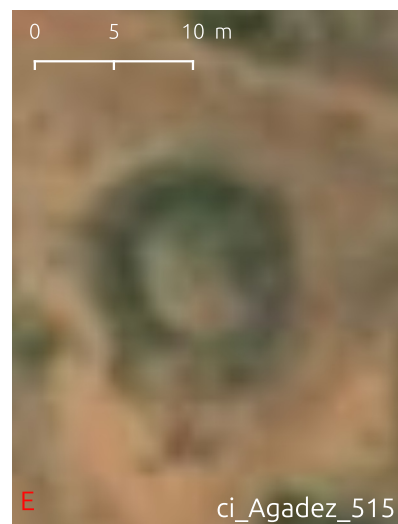

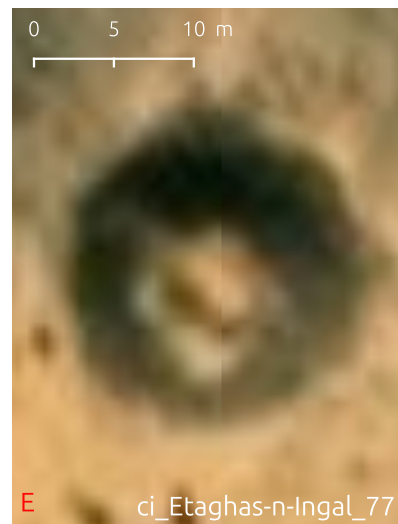

Date : 2024-10-01

Nombre d'enceintes : 160  
Médiane du diamètre : 13 m  
Médiane altitudinale : 446 m
